

## Installing New Fonts into Windows for use with Laser

The Corel Disk #1 is the disk that has the fonts. Put that in your computer and then go into Control Panel. Double click on the Fonts Icon. Click on the File Menu and select Install New Fonts. Can Drives to where your CD-Rom is located. Scroll though Folders until you see Fonts, and then double click. Double click on the folder for Fonts and then double click on the folder for TTF. You will then see that the folders are separated by their beginning letter. Double click on which letter you want and that will open that folder and allow you to select which font you want. You can select multiple fonts to install at one time also.
